[Bulletin 267] ?

RESULTS OF SEED TESTS MADE JULY 1, 1931. TO JUNE 30, 1932

This report contains the results of the inspection for the State Department of Agriculture of three hundred fifty-seven official samples collected throughout the State during the period from July 1, 1931, to June 30, 1932. These were analyzed and the results mailed to the retail dealers. In addition to these official samples twenty-two private samples were analyzed, making a total of three hundred seventy-nine samples inspected.

The seed law does not prohibit the sale of poor seed but it does require that all seed be labelled to show its quality. The buyer is therefore protected. The purpose of the seed inspection work is to determine, within reasonable limits, whether a sample of seed is as good as it is guaranteed to be.

A certain amount of variation is to be expected in comparing the results of two or more purity analyses. For this reason a "tolerance" or variation is allowed in accordance with the following formula, applied to the guarantee given. The sample is considered as being made up of two parts, the one being the pure seed and the other the balance of the sample. The tolerance in per cent allowed for each part is two-tenths of 1 per cent plus 20 per cent of the lesser part. For instance, if a sample is guaranteed 99.60% pure seed, it may test as low as 99.32% or as high as 99.88% and would be "satisfactory." In the same way, a sample guaranteed 92.80% may test as low as 91.17% or as high as 94.43% and be "satisfactory." If a sample is found to be better than the highest figure in the tolerance, it is marked "Above" in this bulletin; if lower than the lowest figure, the actual figure is reported.

A wider tolerance for germination than for purity is allowed between the results of the test and the guarantee, as follows:

<i>Guarantee</i> %	<i>Allowable variation</i> %
90 or over	6
80 or over but less than 90	7
70 or over but less than 80	8
60 or over but less than 70	9
Less than 60	10

Accordingly, a sample guaranteed 92% germination is "satisfactory" if it tests 86% to 98%. A sample guaranteed 85% may fall as low as 78% or as high as 92%. If a sample tests higher than the per cent of variation allowed it is marked "Above" in this bulletin or, if it tests below the variation allowed, the actual figure is reported.

The summary table on the last page will show the general results of the seed inspection work for the year ending June 30, 1932.

It is gratifying to note that during the past three years the percentage of seeds found below, both in purity and in germination, has been steadily decreasing, as shown in the following table:

Year	% Found Below	
	In Purity	In Germination
1930	14%	20%
1931	9%	17%
1932	6%	13%
